

Mean, Median, & Mode

- The "**mean**" is the "average" you're used to, where you add up all the numbers and then divide by the number of numbers.
- The "**median**" is the "middle" value in the list of numbers.
- To **find** the **median**, your numbers have to be listed in numerical order, so you may have to rewrite your list first.
- The "**mode**" is the value that occurs most often. If no number is repeated, then there is no mode for the list.

Mean, Median, & Mode

- The "**mean**" is the "average" you're used to, where you add up all the numbers and then divide by the number of numbers.
- The "**median**" is the "middle" value in the list of numbers.
- The "**mode**" is the value that occurs most often. If no number is repeated, then there is no mode for the list.
- Pick ONE distance graph and ONE time graph and use the data to find mean, median and mode.
